## Instructions for your Cataract Surgery

### Eye Drop Medications: For Surgery Eye Only

- 1) **MOXEZA**: use 1 day before surgery, one drop in the morning and evening
- 2) Use **Red Top** drop 1 hour and ½ hour before leaving home for surgery

### AFTER SURGERY

**MOXEZA**

**DUREZOL**

**ILEVRO**

	MOXEZA	DUREZOL	ILEVRO
Week 1	2 x per day (morning, night)	3 x per day (morning, noon, night)	Once at bedtime
Week 2		2 x per day (morning, night)	Once at bedtime
Week 3		1 time per day (morning)	Once at bedtime
Week 4		1 time per day (morning)	Once at bedtime
Week 5			Once at bedtime
Week 6			Once at bedtime

You will resume using your eye drops the day after surgery. Place the drops onto the operated eye and close for 1 minute. This helps the eye drops absorb into your eye. Wait 15 minutes or more between different drops. If you think the drop missed your eye, it is safe to instill another drop. **It is very important that you wear the plastic protector to bed, and do not rub your eye for one week following the procedure.**
